TM903 - Favorite Restaurant Saving (Use Case: Non-Security)

Actors: MM User

User Story: As a user, I want to save a restaurant as a favorite so I can easily find it later.

Preconditions:

- The user is on a restaurant's profile page.

- The system is online and able to store user preferences.

Description:

- Use case begins when the user clicks the 'Add to Favorites' button.

- The system checks if the restaurant is already in the user's favorites list.

- If not already saved, the system stores the restaurant in the user's favorites list and confirms success.

- If it is already saved, the system notifies the user with a message: 'This restaurant is already in your favorites.'

Postconditions:

- If added successfully, the restaurant appears in the user's favorites list.

- If duplicate, no changes are made.

Alternative Courses of Action:

- If the user cancels before submission, no changes are made.

- If offline, the system queues the favorite request and processes when back online.
